Commissioner Rosa Escareno
Department of Business Affairs and Consumer Protection
121 N. LaSalle Street
Chicago, IL 60602

Taxis with Open Recalls Should Not Pass a BACP Inspection

Dear Commissioner Escareno:

The Center for Auto Safety (Center) is writing today to urge the Department of Business Affairs and Consumer Protection (BACP) to prohibit vehicles with unrepaired federal safety recalls in your jurisdiction from carrying passengers. Taxis with open recalls endanger not only drivers and passengers but also other road users, pedestrians, and cyclists. Vehicles are only recalled when there is a safety defect or a violation of a federal regulation. Recalls are never undertaken for cosmetic reasons, yet potentially thousands of Chicago residents and visitors are unknowingly exposed every day to these deadly risks. Taxis are regulated by your Department, and consumers presume that your oversight protects them from the safety risk of recalled vehicles.

The Center, the nation's premier independent, non-profit consumer advocacy organization dedicated to improving vehicle safety, quality, and fuel economy, makes this request on behalf of our members and all drivers, passengers, and pedestrians who live in, or visit, Chicago. BACP could easily address the unnecessary risk faced by consumers by requiring a check against the federal recall database at each BACP inspection and at least annually. Anything less than such a requirement is willful neglect when it comes to the safety of your drivers and passengers.

We urge BACP to immediately take regulatory and enforcement steps to require all recalls be fixed prior to accepting passengers. To determine whether a vehicle has open recalls is as simple as running its vehicle identification number (VIN) against the National Highway Traffic Safety Administration's (NHTSA) recall database at www.safercar.gov. Under Taxicab Medallion License Holder Rule 3.04b, taxi owners must keep their vehicles in an undamaged and safe condition, where "safe condition" is not limited to compliance with the Illinois Vehicle Code. Under Rule 3.04a, BACP may find a taxicab unfit for public use due to its effect on the health and safety of the drivers and passengers. We believe BACP already has the authority to determine that because a recalled vehicle negatively affects the health and safety of the driver and unsuspecting passengers, owners with a recalled vehicle must either fix the recalls or remove their vehicle from service.

We also recommend making the recall-free requirement explicit and prominent on BACP's website and other safety materials. Such a requirement is something BACP should be promoting,

because maintaining a taxi fleet free from open recalls is a safety feature that attracts customers. Further, such a requirement could help the taxi industry stay competitive with rideshare companies such as Uber and Lyft, neither of which requires their vehicles to be repaired when under recall, a safety lapse which continues to place their drivers, customers, and everyone on the road at risk.

Today, there are over 70 million cars with open recalls across the country, including vehicles with exploding Takata airbags causing at least 24 deaths and General Motors vehicles with faulty ignition switches causing at least 124 deaths. Although we found no statistics about Chicago taxis, the recall rate is probably close to that of other major cities: one in six taxis has open recalls in DC, one in three among Seattle, New York City, Tampa, and Houston.¹

In conclusion, taxis with open recalls pose a serious safety risk for everyone in Chicago. Because taxi owners may be resistant to removing vehicles out of service due to potential lost income while the vehicles are being repaired, it is the statutory and moral responsibility of BACP to direct these repairs be made for everyone's safety. The Center for Auto Safety urges BACP to take decisive actions and require Chicago taxis to not be on the road with open recalls.

Thank you for your attention to this important matter,

Sincerely,

A handwritten signature in black ink, appearing to read "Jason Levine". The signature is fluid and cursive, with a large loop at the end of the last name.

Jason Levine
Executive Director
Center for Auto Safety
