Mr. Frank S. Borris II
Director, Office of Defects Investigation
National Highway Traffic Safety Administration
1200 New Jersey Avenue SE
Washington, DC 20590

Dear Mr. Borris:

Attached please find our most recent list of 245 consumer complaints filed with the Center for Auto Safety (CAS) on Chrysler Totally Integrated Power Module (TIPM) issues. Full complaints may be viewed by clicking on the "View" link in the far left column of the electronic version of this letter.

Complaints from the most recent addition that bear particular scrutiny are reproduced below:

Appears Related to NHTSA Action Number: DP14004 Problem: Sudden Unintended and Uncontrolled Acceleration My NHTSA Complaint: ODI Number: 10662678 filed on 12/7/14 I am taking to a Chrysler dealer tomorrow (12/8/14). Sudden unintended acceleration of our 2010 Chrysler Town and Country Touring was experienced on 2 occasions (8/2/14 and 12/5/14) nearly resulting in a serious accident on each occurrence. Both incidents occurred under similar circumstances. While traveling on a freeway @ approximately 65 mph bearing left (either to change lanes or on a curve) and accelerating, the accelerator pedal drops to the floor with uncontrolled full throttle acceleration. Braking did not stop the acceleration and emergency evasive maneuvers were required to avoid serious accidents on both occasions. Shifting in and out of neutral several times was performed and eventually the accelerator returned to normal operation. I am unsure what caused the unintended acceleration to stop. Key Information Identical during both incidents: 1. Engine oil was changed within days of each incident. Oil change reminder counter was reset using manufacturer reset procedure. 2. Left Turn signal was engaged. 3. Traveling at approximately 65 mph when beginning acceleration (transmission downshifted). 4. Throttle position was approximately 30-40% throttle to accelerate to pass or get up to speed after a curved freeway entrance ramp. 5. Vehicle had been driven for approximately 25 minutes prior to sudden acceleration on each occurrence (however in two completely separate locations). 6. This occurred on 2 occasions with 2 different drivers. 7. Both incidents occurred while on a freeway. 8. Duration of incidents: approximately 10-20 seconds. This appears to be a software bug (I am an IT professional and Electrical Engineer by degree). My family could have been seriously injured or killed as well as others around us. This needs to be fixed immediately for the safety of my family and the general public.

Chris Wood
Leslie, MI

2011 Ram 3500 engine stalls while driving. No warning. I have had both the radio and climate control turn off while I was driving. Both came back on after a few minutes. Dealerships have

replaced the ECM, Fuel injectors, Anti lock brake module, oxygen sensors, nox sensors and other misc. parts. Truck is currently back in the shop. They are checking the fuel pump. (other dealerships have done this as well). Most work has been covered under warranty. Are they avoiding the issue or what. Please add me to the lawsuit. Or at least replace the TIPM!! Vehicle Has stalled several times while pulling my 5th wheel trailer. Left family and myself stranded for several hours. Many similar problems with engine stalling, leaving me in extremely unsafe situations. Vehicle has been towed to dealerships on two occasions. Other times I managed to get vehicle to my destination, but only after several attempts.

Robert Hazeltine
Portland, OR

Constant problems with intermittent starting, wipers not turning off twice, increased acceleration when foot off gas pedal, locks not working, radio malfunctions. I googled and TIPM comes up. Family van for disabled child now I'm scared to drive after the small acceleration in the parking lot.

Carolee Spradley
Spokane, WA

Was hit head on and air bag did not deploy. The car that hit me all his airbags deploy. Had front driver frame replaced. Cost 12,000 dollars to repair. Car won't start sometimes. Had front end aligned twice since accident. Car locks open and close by themselves. Replace head light twice and left rear turn signal twice. Want TIPM replaced.

Claude Conroy
Somerdale, NJ

My wife will drive the vehicle and then the car will intermittently stall while driving even on the highway at high speeds. The vehicle will lock up and she almost had an accident with our 3 small children in the vehicle. We called Chrysler, and they state we need a new TIPM along with other things for \$2,100. The car sits in the garage as it is unsafe to drive. It will restart after a few minutes. It also periodically has an excorcism and start honking and locking doors as if it is possessed. It only happened a couple of times and didn't repeat as no one knew how to fix it.

Michael Rinard
Kansas City, MO

The car simply won't start at times. After some time passes, it will start. While it won't start, all the lights are on and battery is fine. We have taken it to the dealer 5 times, but it has happened approximately 20 times (most recently both 12/27 and 12/28). The dealer has tried multiple solutions (upgraded software, replaced WIN and TIPM, replaced ground wire). This situation is NOT SAFE. My wife is carrying 5 kids around (3 in car seats). She has been stranded multiple times (while pregnant and now with an infant). I have no confidence in the car, and who knows if the power will shut off while the car is underway.

Lincoln Schomer
Clarkston, MI

Airbag fault indicator light on the instrument panel comes on and the OBDII system stores an "airbag system" fault. In addition the horn does not work all the time. According to research this problem is related to the faulty TIPM and/or clockspring. This factory defect has been identified in many of Chrysler's vehicles, but the dealer say they will not warranty this. This defect is covered under highway crash safety device laws and needs to be addressed.

Thomas Almaguer
Carlsbad, CA

Additionally, we would like to direct your attention to a crash that occurred in Virginia on November 9, 2014. A news article describing the crash may be found at the following link: <http://wtvr.com/2014/11/09/police-investigate-fatal-accident-on-295n/> . The vehicle involved was a 2007 Jeep Liberty, a model cursed with both the TIPM problems and the gas tank defect that was the subject of a previous CAS petition. The Liberty was stalled in the middle of the road with no lights before being struck by a semi and bursting into flames, killing the driver.

Please do not hesitate to contact CAS should you need any further information.

Sincerely,

A handwritten signature in black ink, appearing to read 'm/b' followed by a stylized flourish.

Michael Brooks
Staff Attorney
